Allowable Subject Matter

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. David Read on February 26, 2008.

The application has been amended as follows:

Claim 14 has been deleted.

Allowable Subject Matter

2. Claims 1 to 13 and 15 to 23 are allowed.

3. The following is an examiner's statement of reasons for allowance: The art of record does not teach or fairly suggest a bearing steel alloy and its named product, as claimed, wherein the bearing steel alloy has a defined composition and contains eutectic carbides having a circle equivalent diameter with an average value of 0.2 to 1.6 μm , the eutectic carbides having an average area of 0.03 to 2 μm^2 and an area ratio of 2 to 7%, the bearing steel having a hardness of HRC 58 to 62 by JIS and containing a retained austenite of 6 vol.% of less.

4. Inventive claims 1 to 13 and 15 to 23 recite a bearing steel containing 8 to 9.5 wt% Cr whereas applied prior art, Tanaka et al.(US Patent 6,143,425), teaches a bearing steel containing 10 to 22 wt% Cr.

5. As stated in Applicant's arguments submitted November 2, 2007, Tanaka et al. teaches away from lowering the Cr content below 10 wt%. According to Tanaka in column 11, lines 16-18, "Cr is the most important element to provide steel with corrosion resistance, but if the content of Cr is less than 10.0 wt%, then good corrosion resistance cannot be provided." Good corrosion resistance is a main object of Tanaka et al., as evident by the general teaching in column 4, lines 46-47 to column 5, lines 1-27. Thus Tanaka et al explicitly teaches away from using a rolling bearing with a Cr content of less than 10 wt%. Accordingly, there is no motivation to lower the Cr content of Tanaka et al.

6. Moreover as pointed out by Applicant, the present invention solves the technical problem of reducing eutectic carbide size by reducing the amount of carbon and chromium, as disclosed in first full paragraph on page 5 of specification. By comparison, Tanaka limits eutectic carbide size by adding nitrogen and decreasing the amount of carbon, as evident by lines 2-14 of column 11 and lines 60-64 of column 12. There is no motivation to reduce the chromium content in Tanaka et al because the composition of Tanaka et al successfully reduces the eutectic carbide size without lowering the chromium content. Therefore, there is no motivation to modify Tanaka et al by lowering the chromium content to the inventive claimed range of 8 to 9.5 wt%. Accordingly, no prima facie case of obviousness can be established based on the cited reference.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Deborah Yee whose telephone number is 571-272-1253. The examiner can normally be reached on monday-friday 6:00 am-2:30 pm.
